Concept 38.1 Pollination enables gametes to come together within a flower
Sporophyte and gametophyte generations alternate in the life cycles of plants. The life cycles of angiosperms and other plants are characterized by an alternation of generations, in which haploid (n) and diploid ($2n$) generations take turns producing each other.

38. Explain why pyruvate is a key juncture in metabolism. ! Pyruvate represents a fork in the catabolic pathways of glucose oxidation. In a facultative anaerobe, which is capable of both aerobic cellular respiration and anaerobic fermentation, pyruvate is committed to one of those two pathways, usually depending on whether or not oxygen is present.
