The Flight Crew Training Manual (FCTM) is intended to provide information in support of procedures listed in the Flight Crew Operations Manual (FCOM) and techniques to help the pilot accomplish these procedures safely and efficiently. The FCTM is written in a format that is more general than the FCOM. It does not account for airplane configuration differences, unless these differences have an ...

In Part I brief particulars of the accident, the crew and the aircraft are set out. The establishment of the Board of Inquiry and the procedure followed by it are detailed. In Part II the factual circumstances of the accident are detailed. Part III looks at the contributory causes of the accident (human factors and error, corporate deficiencies, the implications of a metric aircraft in a non-metric fleet, equipment factors). In Part IV summaries of evidence from other airlines in Canada, the U.S. and Europe is given. Part V sets out aviation safety recommendations, particularly regarding the metric question on fuelling procedures, equipment improvement, improvements to the Minimum Equipment List, corporate structures and training.

On April 15, 2002, Air China flight 129, a Boeing 767-200ER, operated by Air China, en route from Beijing, China to Busan, Korea, crashed on Mt. Dotdae, near Gimhae Airport, Busan. Of the 166 persons on board, 37 persons survived the crash, while 129 occupants were killed. The Korean Aviation Accident Investigation Board (KAAIB) determined that the probable cause of the crash was pilot error due to poor crew resource management and lost situational awareness during the circling approach of the runway. The Chinese investigation team pointed out that the Korean ATC was not fully licensed and mistakenly directed the airliner to descend to a wrong altitude and that the airport did not inform the crew of the weather conditions at the time. A contributing factor was that the airline made all announcements in Chinese and English, while most passengers were Korean.

This edited textbook is a fully updated and expanded version of the highly successful first edition of Human Factors in Aviation. Written for the widespread aviation community - students, engineers, scientists, pilots, managers, government personnel, etc., HFA offers a comprehensive overview of the topic, taking readers from the general to the specific, first covering broad issues, then the more specific topics of pilot performance, human factors in aircraft design, and vehicles and systems. The new editors offer essential breath of experience on aviation human factors from multiple perspectives (i.e. scientific research, regulation, funding agencies, technology, and implementation) as well as knowledge about the science. The contributors are experts in their fields. Topics carried over from the first edition are fully updated, several by new authors who are now at the fore of the field. New material - which represents 50% of the volume - focuses on the challenges facing aviation specialists today. One of the most significant developments in this decade has been NextGen, the Federal Aviation Administration's plan to modernize national airspace and to address the impact of air traffic growth by increasing airspace capacity and efficiency while simultaneously improving safety, environmental impacts and user access. NextGen issues are covered in full. Other new topics include: High Reliability Organizational Perspective, Situation Awareness & Workload in Aviation, Human Error Analysis, Human-System Risk Management, LOSA, NOSS and Unmanned Aircraft System. Comprehensive text with up-to-date synthesis of primary source material that does not need to be supplemented New edition thoroughly updated with 50% new material and full coverage of NexGen and other modern issues Instructor website with test bank and image collection makes this the only text offering ancillary support Liberal use of case examples exposes readers to real-world examples of dangers and solutions

eBundle: printed book and eBook download code The Pilot's Manual: Ground School will walk you through everything you need to know to pass your FAA Knowledge Exams and earn your pilot certificate. The Fifth Edition of this comprehensive textbook has been updated to reflect current rules, procedures, FAA Airman Certification Standards and technologies including drones, ADS-B, weather services available to pilots and BasicMed. Subjects

covered include aerodynamics, the airplane and its performance factors, physiological factors affecting the pilot, weather, regulations, charts and airspace, airport operations, navigation, and flight planning, including specific instructions on how to use the flight computer. Helpful marginal notes are provided for quick definitions of terms, further emphasis of key points, and mnemonic devices that can be of tremendous benefit to study. Each chapter closes with review questions highlighting the important facts. Ninety percent of the material is for the private pilot applicant, and the remaining ten percent, well-separated, will raise you to the commercial pilot certificate standard. Also available in The Pilot's Manual Series: Flight School--How to fly all the maneuvers required for certification Instrument Flying--Aeronautical knowledge and skill required for the Instrument Rating Multi-Engine Flying--Aeronautical knowledge required to earn a Multi-Engine Rating Access to Flight--An integrated Private Certificate and Instrument Rating curriculum Airline Transport Pilot--Complete ATP certification training program

A ... publication for papers and notes on all aspects of wind energy, including basic engineering, operational experience, development, planning and the many other institutional factors.

Practising fundamental patient care skills and techniques is essential to the development of trainees' wider competencies in all medical specialties. After the success of simulation learning techniques used in other industries, such as aviation, this approach has been adopted into medical education. This book assists novice and experienced teachers in each of these fields to develop a teaching framework that incorporates simulation. The Manual of Simulation in Healthcare, Second Edition is fully revised and updated. New material includes a greater emphasis on patient safety, interprofessional education, and a more descriptive illustration of simulation in the areas of education, acute care medicine, and aviation. Divided into three sections, it ranges from the logistics of establishing a simulation and skills centre and the inherent problems with funding, equipment, staffing, and course development to the considerations for healthcare-centred simulation within medical education and the steps required to develop courses that comply with 'best practice' in medical education. Providing an in-depth understanding of how medical educators can best incorporate simulation teaching methodologies into their curricula, this book is an invaluable resource to teachers across all medical specialties.
