For introductory dynamics courses found in mechanical engineering, civil engineering, aeronautical engineering, and engineering mechanics departments. Better enables students to learn challenging material through effective, efficient examples and explanations.

For introductory mechanics courses found in mechanical engineering, civil engineering, aeronautical engineering, and engineering mechanics departments. Better enables students to learn challenging material through effective, efficient examples and explanations.

This textbook teaches students the basic mechanical behaviour of materials at rest (statics), while developing their mastery of engineering methods of analysing and solving problems.

For introductory statics courses found in mechanical engineering, civil engineering, aeronautical engineering, and engineering mechanics departments. This text enables students to learn challenging material through its effective and efficient examples combined with visual explanations. This SI editions has the same content as Bedford 's Engineering Mechanics: Statics, 5e.

"An introduction to engineering mechanics that offers carefully balanced, authoritative coverage of statics. The authors use a Strategy-Solution-Discussion method for problem solving that explains how to approach problems, solve them, and critically judge the results. The book stresses the importance of visual analysis, especially the use of free-body diagrams. Incisive applications place engineering mechanics in the context of practice with examples from many fields of engineering." (Midwest).

While teaching the basic principles of mechanics in an example-driven format, this innovative text takes a critical thinking approach to help introductory students learn to think like engineers. Compelling photorealistic art, and a robust photograph program prompt students to visualize and think critically about engineering situations while Optional Design Examples and Computational Examples expose students to important ABET topics. This text is supported by the brand new OneKey course management system that enables instructors to post solutions, manage homework, and offer students test/quiz preparation and more via a free class Web site.
