Molecular biology is the area of biology that focuses on the structure of macromolecules, for example proteins and acids, that are essential to life. The theory of evolution has come a long way since Darwin published his theory back in 1859, mainly due to the fact that scientists are able to study organisms in a way that was never possible in the past. Science itself is constantly evolving and offering us more information as to how we, and all other creatures on our planet have evolved and ...
