The General Electric CF6, US military designation F103, is a family of high-bypass turbofan engines produced by GE Aviation. Based on the TF39, the first high-power high-bypass jet engine, the CF6 powers a wide variety of civilian airliners. The basic engine core also powers the LM2500, LM5000, and LM6000 marine and power generation turboshafts. It is gradually being replaced by the newer GENx family.

With the passenger market in distress, engine manufacturers and lessors agreed on the importance of working even more closely with cargo operators. Larry Gray, director of V2500, PW2000 and PW4000 marketing at Pratt & Whitney, also said his company is in regular dialogue with conversion houses and lessors about freighter conversions of 767s, A330s and A321s.

CFS: Engine USM availability still tight | Cargo Facts

The A330 has over ten variants across all passenger, cargo and military configurations. The engine options for the A330 CEOs are General Electric 's CF6-80E, Pratt & Whitney 's PW4000-100 and Rolls Royce 's Trent 700. Of these engines, the Trent 700 has proved to be the most popular option by far for the fleet, as highlighted in the chart below, and this has led to the re-engined A330neo being a single engine option in the Rolls Royce Trent 7000.
