MFI Fuel Engine Control Relay 3000GT/Stealth. This is the MFI Relay that is behind the passenger side console panel. When this goes bad it can cause fuel delivery problems. Sometimes the ECU is suspect and other times it is this relay. It is located behind the carpet panel on the passenger side of the center console.

P0888 DODGE Description The transmission control relay is used to supply power to the solenoid pack when the transmission is in normal operating mode. When the relay is off, no power is supplied to the solenoid pack and the transmission is in Limp-in mode. The relay output is fed back to the Powertrain Control Module . It is referred to as the Transmission Control Relay Output circuit or switched battery.
