superb photographs and electronmicrographs.

From 1971 until his death in 1984, Foucault gave public lectures at the world-famous College de France. Attended by thousands, these were seminal events in the world of French letters. Picador is proud to be publishing the lectures in thirteen volumes. The lectures comprising *Abnormal* begin by examining the role of psychiatry in modern criminal justice, and its method of categorizing individuals who "resemble their crime before they commit it." Building on the themes of societal self-defense in "Society Must Be Defended," Foucault shows how and why defining "abnormality" and "normality" were prerogatives of power in the nineteenth century. The College de France lectures add immeasurably to our appreciation of Foucault's work and offer a unique

window into his thinking.

Includes entries for maps and atlases.

Now in two volumes, the Third Edition of this standard-setting work is a state-of-the-art pictorial reference on orthopaedic magnetic resonance imaging. It combines 9,750 images and full-color illustrations, including gross anatomic dissections, line art, arthroscopic photographs, and three-dimensional imaging techniques and final renderings. Many MR images have been replaced in the Third Edition, and have even greater clarity, contrast, and precision.

The study of stem cell research has

recently gained the attention from a growing, multidisciplinary community of scientist; this exponential growth of interest is driven by the hope of discovering cures for several diseases through transplantation medicine. Trends in Stem Cells Biology and Technology aptly serves this developing community as it reveals new aspects of stem cell research by specifically covering studies focused on spermatogonial stem cells, uniparental embryonic stem cell lines, the generation of gametes from stem cells, reprogramming germ cells to stem cells, nuclear and somatic cell genetic reprogramming, tissue engineering and mechanotransduction of stem cells and finally the development of stem cell technologies for the treatment of deafness, heart disease, corneal injury and diabetes. With contributions by leading scientists and renowned scholars, Trends in Stem

Cells Biology and Technology offers a wide audience cutting edge information at a crucial time in this ever expanding field.

Written by three Michelin-starred chefs: Charlie Trotter, Marcus Wareing, and Shaun Hill, this book covers every cutting technique—chopping, slicing, dicing, carving, filleting—for every relevant ingredient: meat, fish, shellfish, vegetables, herbs, and fruit.

Stem cells are the focus of intense interest from a growing, multidisciplinary community of investigators with new tools for isolating and characterizing these elusive cell types. This volume, which features contributions from many of the world's leading laboratories, provides a uniquely broad and authoritative basis for understanding the biology of stem cells and the current excitement about their
