A summation method that is linear and
stable cannot sum the series $1 + 2 + 3 + \dots$
to any finite value. (Stable means that
adding a term to the beginning of the
series increases the sum by the same
amount.) This can be seen as follows. If
 $1 + 2 + 3 + \dots = x$, then adding 0 to both sides
gives $0 + 1 + 2 + \dots = 0 + x = x$ by stability.
