The Navier – Stokes equations are useful because they describe the physics of many phenomena of scientific and engineering interest. They may be used to model the weather, ocean currents, water flow in a pipe and air flow around a wing. The Navier – Stokes equations, in their full and simplified forms, help with the design of

Navier – Stokes equations - Wikipedia
The Navier-Stokes equation, in modern notation, is $\rho \frac{D\mathbf{u}}{Dt} = -\nabla P + \mu \nabla^2 \mathbf{u}$, where \mathbf{u} is the fluid velocity vector, P is the fluid pressure, ρ is the fluid
