High-Speed PCB Design Guide In the present world, electronic products are transforming into more complex devices due to the increase in the component count on the PCB. This is making room for high-density and high-frequency of circuit operation. Typically, signal frequencies from 50MHz to as high as 3GHz are considered to be high-speed signals.

PCB card guides are used to mount circuit boards in tight spaces. One example of this is a PCB rack. Use a PCB vertical card guide or a horizontal one depending on the mounting direction of PCBs in your application. Card guides are often used to save space and prevent boards from bending.

PCB layout best practices recommend that you always place traces as shortly and directly as possible between components. If your component placement forces horizontal trace routing on one side of the board, then always route traces vertically on the opposite side. This is one of many important 2 layer PCB design rules.
