Selection Criteria Of Waste Processing Technologies

Thank you for reading selection criteria of waste processing technologies. Maybe you have knowledge that, people have look hundreds times for their chosen books like this selection criteria of waste processing technologies, but end up in infectious downloads. Rather than enjoying a good book with a cup of coffee in the afternoon, instead they juggled with some malicious virus inside their laptop.

selection criteria of waste processing technologies is

Read Free Selection Criteria Of Waste Processing Technologies

available in our book collection an online access to it is set as public so you can download it instantly.

Our books collection spans in multiple locations, allowing you to get the most less latency time to download any of our books like this one.

Kindly say, the selection criteria of waste processing technologies is universally compatible with any devices to read

The Department of Energy's (DOE) Savannah River Site (SRS) high-level waste (HLW) program is responsible for storage, treatment, and immobilization of HLW for disposal. The Salt Processing Project (SPP) is the salt waste (water-soluble) treatment

Read Free Selection Criteria Of Waste Processing Technologies

portion of this effort. The overall SPP encompasses the selection, design, construction, and operation of technologies to prepare the salt-waste feed material for immobilization at the site's Saltstone Production Facility (SPF) and vitrification facility (Defense Waste Processing Facility [DWPF]). Major constituents that must be removed from the salt waste and sent as feed to DWPF include cesium (Cs), strontium (Sr), and actinides. In April 2000, the DOE Deputy Secretary for Project Completion (EM-40) established the SRS Salt Processing Project Technical Working Group (TWG) to manage technology development of treatment alternatives for SRS high-level salt wastes. The separation alternatives investigated included three

Read Free Selection Criteria Of Waste Processing Technologies

candidate Cs-removal processes selected, as well as actinide and Sr removal that are also required as a part of each process. The candidate Cs-removal processes are: crystalline Silicotitanate Non-Elutable Ion Exchange (CST); caustic Side Solvent Extraction (CSSX); and small Tank Tetraphenylborate Precipitation (STTP). The Tanks Focus Area was asked to assist DOE by managing the SPP research and development (R & D), revising roadmaps, and developing down-selection criteria. The down-selection decision process focused its analysis on three levels: (a) identification of goals that the selected technology should achieve, (b) selection criteria that are a measure of performance of the goal, and (c) criteria

Read Free Selection Criteria Of Waste Processing Technologies

scoring and weighting for each technology alternative. After identifying the goals and criteria, the TWG analyzed R & D results and engineering data and scored the technology alternatives versus the criteria. Based their analysis and scoring, the TWG recommended CSSX as the preferred alternative. This recommendation was formalized in July 2001 when DOE published the Savannah River Site Salt Processing Alternatives Final Supplemental Environmental Impact Statement (SEIS) and was finalized in the DOE Record of Decision issued in October 2001.

There are 3 types of REWDC container types listed. Type 1 is used for long term storage of conditions

waste. It's made of steel and it's a 55-gallon galvanized drum with a 90 mil HDPE liner. Type 2 is used for solid waste, point of generation and short term storage. It can be made of steel or poly. They come in 2-gallon, 5-gallon, 30-gallon, and 55-gallon drums used with 4 mil polyethylene liner. Type 3 is used for liquid waste. It can be made of steel or poly. It comes in 2-gallon, 5-gallon, 30-gallon, or 55-gallon drums. They have a closed head.

Waste-to-Energy: Multi-criteria Decision Analysis for Sustainability Assessment and Ranking offers a

Read Free Selection Criteria Of Waste Processing Technologies

comprehensive view of the technologies and processes for energy generation as a path for waste treatment, presenting all the necessary information and tools for selecting the most sustainable waste-to-energy solution under varying conditions. The book combines methods such as lifecycle assessment, sustainability assessment, multi-criteria decision-making, and multi-objective optimization modes. In addition, it provides an overview of waste-to-energy feedstocks, technologies and implementation, then goes on to investigate the critical factors and key enablers that influence the sustainable development of the waste-to-energy industry. The book proposes several decision-making methods for the ranking and selection of waste-to-

energy scenarios under different levels of certainty and information availability, including multi-criteria, multi-actor and multi-attribute methods. Finally, the book employs lifecycle tools that allow the assessment of economic, environmental and social sustainability of waste-to-energy systems. Explores existing and state-of-the-art waste to energy technologies and systems, as well as their feedstock requirements Presents a wide perspective of sustainability issues of waste-to-energy technologies, also discussing critical influential factors or key enablers for promoting the sustainable development of waste-to-energy solutions Provides multi-dimensional decision-making techniques for choosing the most suitable and sustainable waste-to-

energy technologies for different scenarios

Due to the rapid increase in the production and consumption processes, societies generate as well as reject solid materials regularly from various sectors. The primary goals of this book are to encourage reduction of waste at the source and to foster implementation of cost-effective integrated solid waste management systems.

Read Free Selection Criteria Of Waste Processing Technologies

This publication will assist decision makers in countries using nuclear energy for non-power applications to organize their waste management practices. It describes methodologies, criteria and options for the selection of appropriate technologies for processing and storing radioactive waste generated by these applications. A review of both technical and non-technical factors important for decision making and planning, and for implementation of waste management activities at the country and facility levels, is presented. Practical recommendations are made for the selection of particular technologies for different scales
