FOX FILES combines in-depth news reporting from a variety of Fox News on-air talent. The program will feature the breadth, power and journalism of rotating Fox News anchors, reporters and producers.

Adam Gordon is a brilliant, if highly unreliable, young American poet on a prestigious fellowship in Madrid, struggling to establish his sense of self and his relationship to art. What is actual when our experiences are mediated by language, technology, medication, and the arts? Is poetry an essential art form, or merely a screen for the reader's projections? Instead of following the dictates of his fellowship, Adam's "research" becomes a meditation on the possibility of the genuine in the arts and beyond: are his relationships with the people he meets in Spain as fraudulent as he fears his poems are? A witness to the 2004 Madrid train bombings and their aftermath, does he participate in historic events or merely watch them pass him by? In prose that veers between the comic and tragic, the self-contemptuous and the inspired, *Leaving the Atocha Station* is a portrait of the artist as a young man in an age of Google searches, pharmaceuticals, and spectacle. Born in Topeka, Kansas, in 1979, Ben Lerner is the author of three books of poetry *The Lichtenberg Figures*, *Angle of Yaw*, and *Mean Free Path*. He has been a finalist for the National Book Award and the Northern California Book Award, a Fulbright Scholar in Spain, and the recipient of a 2010-2011 Howard Foundation Fellowship. In 2011 he became the first American to win the Preis der Stadt Münster für Internationale Poesie. *Leaving the Atocha Station* is his first novel.

When a Mapuche chief suddenly goes missing, a British naturalist is asked to find him in the vast

Argentine pampas Clarke, a nineteenth-century English naturalist, roams the pampas in search of that most elusive and rare animal: the Legibrerian hare, whose defining quality seems to be its ability to fly. The local Indians, pointing skyward, report recent sightings of the hare but then ask Clarke to help them search for their missing chief as well. On further investigation Clarke finds more than meets the eye: in the Mapuche and Voroga languages every word has at least two meanings. Witty, very ironic, and with all the usual Airian digressive magic, *The Hare* offers subtle reflections on love, Victorian-era colonialism, and the many ambiguities of language.

What is fanfiction, and what is it not? Why does fanfiction matter? And what makes it so important to the future of literature? *Fic* is a groundbreaking exploration of the history and culture of fan writing and what it means for the way we think about reading, writing, and authorship. It's a story about literature, community, and technology—about what stories are being told, who's telling them, how, and why. With provocative discussions from both professional and fan writers, on subjects from *Star Trek* to *The X-Files* and *Buffy the Vampire Slayer* to *Harry Potter*, *Twilight*, and beyond, *Fic* sheds light on the widely misunderstood world(s) of fanfiction—not only how fanfiction is transforming the literary landscape, but how it already has. *Fic* features a foreword by Lev Grossman (author of *The Magicians*) and interviews with Jonathan Lethem, Doug Wright, Eurydice (Vivean Dean), and Katie Forsythe/wordstrings. A fascinating exploration of how insights from computer algorithms can be applied to our everyday lives, helping to solve common decision-making problems and illuminate the workings of the human mind. All our lives are constrained by limited space and time, limits that give rise to a particular set of problems. What should we do, or leave undone, in a day or a lifetime? How much messiness should we accept? What balance of new activities and familiar favorites is the most fulfilling? These may seem like uniquely human quandaries, but they are not: computers, too, face the same constraints, so computer scientists have been grappling with their version of such issues for decades. And the solutions they've found have much to teach us. In a dazzlingly interdisciplinary work, acclaimed author Brian Christian and cognitive scientist Tom Griffiths show how the algorithms used by computers can also untangle very human questions. They explain how to have better hunches and when to leave things to chance, how to deal with

overwhelming choices and how best to connect with others. From finding a spouse to finding a parking spot, from organizing one's inbox to understanding the workings of memory, *Algorithms to Live By* transforms the wisdom of computer science into strategies for human living.

This is a book about the big questions in life: knowledge, consciousness, fate, God, truth, goodness, justice. It is for anyone who believes there are big questions out there, but does not know how to approach them. Think sets out to explain what they are and why they are important. Simon Blackburn begins by putting forward a convincing case for the study of philosophy and goes on to give the reader a sense of how the great historical figures such as Descartes, Hume, Kant, and Wittgenstein have approached its central themes. Each chapter explains a major issue, and gives the reader a self-contained guide through the problems that philosophers have studied. The large scope of topics covered range from scepticism, the self, mind and body, and freedom to ethics and the arguments surrounding the existence of God. Lively and approachable, this book is ideal for all those who want to learn how the basic techniques of thinking shape our existence.

Outsider musicians can be the product of damaged DNA, alien abduction, drug fry, demonic possession, or simply sheer obliviousness. This book profiles dozens of outsider musicians, both prominent and obscure—figures such as The Shaggs, Syd Barrett, Tiny Tim, Jandek, Captain Beefheart, Daniel Johnston, Harry Partch, and The Legendary Stardust Cowboy—and presents their strange life stories along with photographs, interviews, cartoons, and discographies. About the only things these self-taught artists have in common are an utter lack of conventional tunefulness and an overabundance of earnestness and passion. But, believe it or not, they're worth listening to, often outmatching all contenders for inventiveness and originality. A CD featuring songs by artists profiled in the book is also available.

This major new book offers a highly original account of ethical and political subjectivity in contemporary culture. It makes a strong case for a non-unitary or nomadic conception of the subject, in opposition to the claims of ideologies such as conservatism, liberal individualism and techno-capitalism. Braidotti takes a bold stand against moral universalism, while offering a vigorous defence of nomadic ethics against the charges of relativism and nihilism. She calls for a new form of ethical accountability that takes "Life" as the subject, not the object, of enquiry. This ethics is presented as a fundamental reconfiguration of our being in the world and it calls for more conceptual creativity in the production of worldviews that can better enable us to behave ethically in a

technologically and globally mediated world. The nomadic ethical subject negotiates successfully the complex tension between the multiplicity of political forces on the one hand and the sustained commitment to emancipatory politics on the other. Transpositions provides an intellectually rich guide to the leading critical debates of our time and will be of great interest to scholars and students throughout the humanities and social sciences.

Susan Silverman's ex doesn't call himself "Silverman" anymore--he's changed his name to "Sterling." And that's not the only thing that's phony about him. A do-gooding charity fundraiser, he's been accused of sexual harassment by no less than four different women. And not long after Spenser starts investigating, Sterling is wanted for a bigger charge: murder...

Employees who possess problem-solving skills are highly valued in today's competitive business environment. The question is how can employees learn to deal in innovative ways with new data, methods, people, and technologies? In this groundbreaking book, Arthur VanGundy -- a pioneer in the field of idea generation and problem solving -- has compiled 101 group activities that combine to make a unique resource for trainers, facilitators, and human resource professionals. The book is filled with idea-generation activities that simultaneously teach the underlying problem-solving and creativity techniques involved. Each of the book's 101 engaging and thought-provoking activities includes facilitator notes and advice on when and how to use the activity. Using 101 Activities for Teaching Creativity and Problem Solving will give you the information and tools you need to: Generate creative ideas to solve problems. Avoid patterned and negative thinking. Engage in activities that are guaranteed to spark ideas. Use proven techniques for brainstorming with groups. Order your copy today.
